EDUCATION

Southern Careers Institute Powered by Woz U

11/2018 - 9/2019

Learned how to build web applications using Spring, React, and several other interesting programming languages. Acquired skills to create richly interactive client-side apps using the JavaScript React AND Angular library. Worked 40+ hours weekly on individual and team projects.

WORK/EXPERIENCE

Test Technician, Honeywell

8/2017-Current

- Test all pneumatic valves for a range of commercial and military airplanes to ensure proper calibration of unit
- Work together with a team to assemble, test, prepare, then ship the unit to the customer
- Work with a team to handle any issues as soon as they arise to keep the product moving through the facility
- Ensure the customer gets their product quickly and built/tested properly

PROJECTS

Hobby Web Application / Full-stack user authentication for hobby web app

GITHUB URL: <https://github.com/Woz-U-Group-Projects/team-brave-knuth>

As a team we created a hobby web application to help likeminded individuals connect.

- I personally worked on user authentication on the backend using spring making the back-end able to connect with MySQL to add new users into the database.
- I used JWT (Json Web Token) to safely sign up/ login/ and logout each user using a bearer token.
- For the front-end, I simply built two individual forms to perform the actions needed.

SpaceX Launch Data / Full-Stack web app with GraphQL, Express, React, & Apollo

GITHUB URL: <https://github.com/BJBT/SpaceX-Launch-Data>

I created a web application to view SpaceX's launch data for all 100+ of their missions.

- I pulled the spaceX API for the data of this project
- I used GraphQL, to deal with my api, & Express for the back-end server
- I used Apollo Client to manage my projects data
- I used react for the UI of my project
- The app simply displays the data and uses color codes for successful or unsuccessful missions
